

Risk Factors & Reasons for Food Insecurity Among U.S. Military Service Members

ABOUT THIS WEBINAR:

The prevalence of food insecurity in the U.S. military is 25% compared to only 10% in the civilian sector. Substantial research has been done since 2018 to determine the risk factors and reasons for food insecurity as well as the subsequent consequences of food insecurity in the military. This presentation will review the published research on food insecurity in the military and discuss strategies to minimize food insecurity in the Armed Forces, including an example from the field at Joint Base San Antonio.
